The recent withdrawal of rofecoxib (Vioxx) from the worldwide market has focused intense public scrutiny on drug safety. Although the US Food and Drug Administration monitors drug safety after product approval, some have raised concerns about whether this system, which relies primarily upon voluntary reporting of adverse drug effects, is adequate to protect the public from unsafe pharmaceuticals.

For example, consider a drug that decreases mortality of a certain disease from 10% to 5%, an absolute risk reduction of 5% (1 in 20). That means that of 100 patients, 90 would live even without treatment, and thus would not benefit from the drug. Also, 5 of the 100 patients will die even though they take the drug and thus also do not benefit.
