GRAVITY FLOW Water Systems

One of the most basic ways to build a running water system is the gravity-fed system. It consists of a cistern or holding tank at a higher elevation than the point of use. This allows gravity to do all the work of moving the water through the system eliminating the need for a water

As the name suggests, a gravity fed system relies on gravity to help water flow through your home's pipes. The mains supply of water enters your property and divides into two pipes. One pipe takes the water to the cold tap in the kitchen and the other passes it to a large water storage tank, which is usually stored in the roof space.

from debris and submerged sufficiently to ensure no air enters the pipeline • a properly sized pipe diameter, considering the pipeline length, the elevation difference (the energy available to move water), and the water flow required

A guide to gravity-fed water

Download Ebook Gravity Flow Water Supply Conception Design And Sizing For systems - thisNZlife

What is the gravity flow? The gravity flow of water is when the flow of water in a pipe is caused by the force of gravity. This required the pipe to be inclined, as otherwise the water will not flow downwards. The must also be no external energy (for example, from a pump) used to move the water forward.
