Inside the Risk/Reward Ratio. The risk/reward ratio is used by many investors to compare the expected returns of an investment with the amount of risk undertaken to capture these returns.

Calculating Risk and Reward - Investopedia

For example Risk: 300 Reward: 600 This will be displayed as 1/2 as we can earn 2 units for a potential loss of 1 unit ($600/300 = 2$) for those wondering the NASA level mathematics behind :) Best regards Dave 173. 4. Leverage Strategy and a few words on risk/opportunity. Daveatt.

Riskreward — Indicators and Signals — TradingView

The risk/reward ratio, sometimes known as the R/R ratio, is a measure that compares the potential profit of a trade to its potential loss. It is calculated by dividing the difference between the entry point of a trade and the stop-loss order (the risk) by the difference between the profit target and the entry point (the reward).

Risk/Reward Ratio: What It Is and How to Calculate It

This is a companion video to my "Trade Like a Pirate" article showing how the Long & Short tool can help you manage your "aRRR" - Your Reward-to-Risk Ratio. Whether you are trading a Company, a Currency, or Commodity, you want to Consistently trade your positions in terms of Risk and Reward for consistent results and to not "blow up your account" with a bad trade.

Riskreward — Education — TradingView

With this indicator, you can now implement a risk vs reward framework with ease. It is FULLY CUSTOMIZABLE to cater to your trade setup. Simply input your entry, then input your pre-determined stop loss, and the code will AUTOMATICALLY plot a framework for you to understand where your entry, stop, 1R, 2R, 3R and 4R reside on the chart.
